PROFESSIONAL SUMMARY

Fullstack Senior Engineer with 5 years building production-grade fintech platforms across consumer lending, general insurance, and life insurance. Owned an end-to-end Loan Origination–Loan Management System (LOS–LMS) integration that supported business growth to INR 200 crore and saved 1,500+ monthly employee-hours. Strong in microservices architecture (FastAPI), event-driven workflows (Celery, RabbitMQ, webhooks), and scalable AWS infrastructure using Docker, Kubernetes, and Terraform. Proven leadership through mentoring, code reviews, hiring (25+ interviews), and building a core engineering team. Comfortable owning architecture decisions and shipping secure, compliance-aware financial systems.

TECHNICAL SKILLS

Backend & Microservices: FastAPI, Flask, Express.js (Node.js), REST APIs, WebSockets

Distributed Systems & Messaging: Celery, RabbitMQ, Redis, Webhooks, Asynchronous Workers

Languages & Runtimes: Python, JavaScript, TypeScript, [Node.js](https://nodejs.org/), Golang

Databases: PostgreSQL, MongoDB, Redis

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS, IAM, VPC, API Gateway, CloudWatch, CloudFront, Route 53, WAF), Terraform, Docker, Kubernetes, GitHub Actions, Jenkins, Nginx, Git

Frontend: Angular, Next.js (React), Tailwind CSS

Engineering Practices: System Design, Microservices, Event-Driven Architecture, SOLID Principles, Design Patterns, Test-Driven Development (TDD), CI/CD, Code Reviews, Security Hardening, Jira

WORK EXPERIENCE

Senior Engineer | Go Digital | Mumbai, India

Apr 2026 – Present

- Refactored a production FastAPI backend to reduce technical debt, implementing production best practices and resolve long-standing issues across the Angular frontend, improving maintainability and shipping velocity.
- Managed architecture-level AWS infrastructure with Terraform across production, QA, sandbox, and development environments; configured API Gateway integrations and unblocked Lambda layer build/deployment for AI model loading in GitHub Actions CI/CD pipelines.

Full Stack Developer | Western Capital Advisors (Lending NBFC) | Mumbai, India

Feb 2025 – Apr 2026

- Led end-to-end integration of the **Loan Origination System and Loan Management System (LOS–LMS)** using FastAPI, Flask, Node.js, and Angular — automating customer deduplication, disbursement, and payment processing flows. Saved 1,500+ monthly employee-hours and supported business growth to INR 200 crore.
- Designed event-driven payment reconciliation by implementing a Razorpay webhook receiver on AWS Lambda to sync disbursements and repayments with the internal LMS in real time, eliminating manual entry and reconciliation gaps.
- Deployed a real-time analytics platform on Apache Superset with Docker Compose, integrating Redis, PostgreSQL, and Celery; served 100+ employees over SSL-secured Nginx, giving credit and ops teams self-serve visibility into the lending portfolio.
- Automated ETL from MongoDB to PostgreSQL into a unified data mart, enabling consistent business intelligence and regulatory reporting across loan products.
- Owned AWS infrastructure (IAM, EC2, S3, CloudWatch, VPC) to improve observability, tracing, and security posture across lending operations; maintained automated backups via custom Bash scripts.

- Conducted 25+ technical interviews and helped build a core engineering team of three, owning the hiring bar for backend engineers.

Associate Consultant | Datacurate Technologies | Mumbai, India

Jun 2022 – Feb 2025

Client: HDFC ERGO General Insurance

- Designed and built smart insurance quote-to-policy systems in Flask and Node.js (Express), reducing turnaround from 8 business days to near-instantaneous and unlocking same-session conversions.
- Fixed **8 critical security vulnerabilities** in production and championed code quality by introducing unit/integration testing and refactoring legacy services along SOLID principles.
- Pioneered the migration plan from a legacy Flask frontend to Next.js (React) to improve scalability, performance, and developer experience.
- Built an OCR-based pipeline to extract data from competitor policy PDFs, enabling data-driven premium pricing.

Client: Kotak Life Insurance

- Optimized ETL pipelines for complex data marts, improving processing efficiency by 30% for analytical dashboards.
- Built a parallel-processing wrapper module that cut data load times by 50%.

Flutter Developer Intern | IAHV (Art of Living) | Mumbai, India

Aug 2020 – Mar 2021

- Led integration and development of a Flutter-based project management [mobile app](#) with a team of 12, delivering a Node.js backend and Firebase database for hierarchical management of watershed projects across Maharashtra.

PROJECTS

GSTMind — gstmind.qzz.io

- Architected a full-stack SaaS product on a FastAPI microservices backend (authentication, API gateway, CMS, asynchronous workers) to automate GST invoice processing, reducing manual accounting work by 90% for SMEs and enterprises.
- Designed a model-agnostic AI Worker on Celery to support both API-based and self-hosted models for data extraction, decoupling model choice from the core service.
- Built a Jenkins CI/CD pipeline that builds Docker images, pushes to Docker Hub, and deploys via Docker Compose on EC2 behind Nginx — triggered on git push to production (Gitflow), with MinIO for S3-compatible object storage and a planned Kubernetes/Prometheus/Grafana migration path.

Advanced Authentication Microservice — [GitHub Repository](#)

- Built a reusable, production-grade FastAPI authentication microservice supporting email and social login (Google, GitHub) with JWT access/refresh tokens.
- Deployed on Kubernetes with auto-scaling and a persistent PostgreSQL backing store to ensure high availability under variable load.

EDUCATION

Bachelor of Engineering, Information Technology | Mumbai University

2018 – 2022

CGPA: 8.93 / 10

CERTIFICATIONS & ACHIEVEMENTS

- Microsoft Certified: Azure Fundamentals (AZ-900) — [Credential](#)
- Winner, Mumbai Hackathon 2022 (organized by Zerodha & Frappe) — [Certificate](#)
